Practice the tricky questions given in the worksheet on mental math addition. Try to add by using the trick and skills so that the benefits can be enjoyed by both for kids and adults. Anyone can learn mental math skills and tricks which are easily available by performing mentally on a regular basis.1. Try to add the following numbers by performing mentally by using the tricks and skills:(i) 4 + 9(ii) 3 + 0(iii) 7 + 24(iv) 17 + 8(v) 70 + 30(vi) 49 + 89 (v) 60 + 90 (vi) 30 + 70 2. Add the following in an easy method or strategies to count mentally: (i) 49 + 53 (ii) 77 + 13 (iii) 63 + 49 (iv) 79 + 83 (v) 82 + 93 (vi) 46 + 63 (vii) 69 + 50 (viii) 96 + 94 (ix) 86 + 53 3. Find the sum of the following numbers using the tricky and skilled method to count: (i) 3 + 9 + 7 (ii) 15 + 5 + 20 (iii) 9 + 8 + 1 (iv) 27 + 42 + 33 (v) 48 + 42 + 60 (vi) 88 + 43 + 22 (vii) 157 + 841 (viii) 288 + 43 (ix) 37 + 58 + 63 Answers for the worksheet on mental addition are given below to check whether you get the exact answers when you use the tricky strategies to add mentally. Answers:1. (i) 13(ii) 3(iii) 31(iv) 25(v) 100(vi) 120(v) 150(vi) 1002. (i) 102(ii) 90(iii) 112(iv) 162(v) 175(vi) 109(vii) 119(viii) 190(ix) 1393. (i) 19(ii) 40(iii) 18(iv) 102(v) 150(vi) 153(vii) 998(viii) 331(ix) 158 3rd Grade Math Worksheets3rd Grade Math LessonsFrom Worksheet on Mental Math Addition to HOME PAGE Didn't find what you were looking for? Or want to know more information about Math Only Math. Use this Google Search to find what you need. Share this page: What's this? Welcome to the Math Salamanders Year 6 Mental Maths Tests. Here you will find a wide range of Mental Maths Worksheets aimed at Year 6 children which will help your child to learn number facts and practise their number skills. Our selection of mental maths worksheets is a great way of practising your number and maths skills. The sheets can be used in a variety of ways, as a test or revision practise, or as part of a weekly quiz to help reinforce skills. They can also be used as an oral and mental starter to a lesson to get brains working! One of the best ways to use these sheets is to get children to work in pairs, discussing the questions as they work through them. The questions have been designed to practise a range of maths skills from number to geometry and measurement facts, including using time and money. The quizzes are in order of difficulty with the questions getting slightly harder in each quiz. Our Year 6 Mental Math Worksheets contain a wide range of different questions and math skills. Each sheet contains 18 questions, and is provided with an answer sheet. The level of difficulty gets harder as you progress through the sheets. The topics covered include: mental arithmetic - addition, subtraction, multiplication and division; missing fact questions; place value questions up to 10000; geometry questions based around 2d and 3d shape properties; money questions; fraction, decimal and percentage questions; measures problems; word problems; ratio and proportion questions; time questions, including date and calendar questions. The worksheets in this section have been designed for children at a Year 5 level. The sheets follow the same format as the ones on this page, but are at a simpler level. Year 5 Mental Maths Worksheet If you are looking for some online practise of mental maths Year 4 facts, then we have several practise zones where you can test your knowledge of a range of maths facts and print out your results online. There are certificates to win, and instant feedback on your progress. Here you will find a range of free printable 5th Grade Math games. All children like to play Math games, and you will find a good range of Grade 5 Math Games here for your child to play and enjoy. The following games involve different 5th Grade Math activities which you and your child can enjoy together. All the free 5th Grade Math Worksheets in this section follow the Elementary Math Benchmarks for Grade 5. Looking for some cool online maths games to play at a Year 6 level? Try the Primary games website where you will find a bank full of different games to play! Using the link below will open the primary games website in a new browser window. How to Print or Save these sheets Need help with printing or saving? Follow these 3 easy steps to get your worksheets printed out perfectly! How to Print or Save these sheets Need help with printing or saving? Follow these 3 easy steps to get your worksheets printed out perfectly! The Math Salamanders hope you enjoy using these free printable Math worksheets and all our other Math games and resources. We welcome any comments about our site or worksheets on the Facebook comments box at the bottom of every page. Page 2 Welcome to our 2 Digit Multiplication Worksheets page. We have plenty of worksheets on this page to help you practice the skills of multiplying 2-digit numbers by 1 or 2 digits. We have split the worksheets on this page into two sections: 2-digit x 1-digit multiplication (3rd grade) 2-digit x 2-digit multiplication (4th grade) Each section ends with some trickier challenge sheets for more able students. Within each section, the sheets are carefully graded with the easiest sheets first. These sheets are aimed at 3rd graders. Sheets 1 to 4 consists of 15 problems; sheets 5 and 6 consist of 20 problems. Sheets 1 and 2 involve multiplying 2-digit numbers by 2, 3, 4 or 5. Sheets 3 to 6 involve multiplying a 2-digit number by single digit numbers and finding increasing trickier products. These 2-digit multiplication worksheets have been designed for more able students who need that extra challenge! These sheets are aimed at 4th graders. Sheet 1 involves 2-digit by 2-digit multiplication with smaller numbers and answers up to 1000. Sheets 2 to 4 have harder 2-digit numbers to multiply and answers that are generally larger than 1000. These 2-digit multiplication worksheets have been designed for more able students who need that extra challenge! We have more 2-digit multiplication worksheets, including 2-digit x 3-digit multiplication problems on this page. More Double digit Multiplication Worksheets (harder) Take a look at some more of our worksheets similar to these. Need to create your own long or short multiplication tables up to 10 x 10; understand and use different models of multiplication; solve a range of Multiplication problems. All the free 3rd Grade Math Worksheets in this section are informed by the Elementary Math Benchmarks for 3rd Grade. Here you will find a range of Free Printable Multiplication Games to help kids learn their multiplication facts. Using these games will help your child to learn their multiplication facts to 5x5 or 10x10, and also to develop their memory and strategic thinking skills. Multiplication Math Games How to Print or Save these sheets Need help with printing or saving? Follow these 3 easy steps to get your worksheets printed out perfectly! How to Print or Save these sheets Need help with printing or saving? Follow these 3 easy steps to get your worksheets printed out perfectly! The Math Salamanders hope you enjoy using these free printable Math worksheets and all our other Math games and resources. We welcome any comments about our site or worksheets on the Facebook comments box at the bottom of every page. Mathematics can be fun if you treat it the right way. Maths is nothing less than a game, a game that polishes your intelligence and boosts your concentration. Compared to older times, people have a better and friendly approach to mathematics which makes it more appealing. The golden rule is to know that maths is a mindful activity rather than a task. There is nothing like hard math problems or tricky maths questions, it's just that you haven't explored mathematics well enough to comprehend its easiness and reliability. Maths tricky questions and answers can be transformed into fun math problems if you look at it as if it is a brainstorming session. With the right attitude and friends and teachers, doing math can be most entertaining and delightful. Math is interesting because a few equations and diagrams can communicate volumes of information. Treat math as a language, while moving to rigorous proof and using logical reason for performing a particular step in a proof or derivation. Treating maths as a language totally eradicates the concept of hard math problems or tricky maths questions from your mind. Introducing children to fun maths questions can create a strong love and appreciation for maths at an early age. This way you are setting up the child's successful future. Fun math problems will urge your child to choose to solve it over playing bingo or baking. Apparently, there are innumerable methods to make easy maths tricky questions and answers. This includes the inception of the ideology that maths is simpler than their fear. This can be done by connecting maths with everyday life. Practising maths with the aid of dice, cards, puzzles and tables reassures that your child effectively approaches Maths. If you wish to add some fun and excitement into educational activities, also check out Here is the Downloadable PDF that consists of Fun Math questions. Click the Download button to view them. Fun Math Questions Download Here are some fun, tricky and hard to solve maths problems that will challenge your thinking ability. 2=3 3=5 4=4 5=4 Then, 6=? Answer: is 3, because 'six' has three letters What is the number of parking space covered by the car? This tricky math problem went viral a few years back after it appeared on an entrance exam in Hong Kong... for six-year-olds. Supposedly the students had just 20 seconds to solve the problem! Answer: Believe it or not, this "math" question actually requires no math whatsoever. If you flip the image upside down, you'll see that what you're dealing with is a simple number sequence. Replace the question mark in the above problem with the appropriate number. Answer: Which number is equivalent to 3^(4)÷3^(2) This problem comes straight from a standardized test given in New York in 2014. Answer: There are 49 dogs signed up for a dog show. There are 36 more small dogs than large dogs. How many small dogs have signed up to compete? This question comes directly from a second grader's math homework. Answer: To figure out how many small dogs are competing, you have to subtract 36 from 49 and then divide that answer, 13 by 2, to get 6.5 dogs, or the number of big dogs competing. But you're not done yet! You then have to add 6.5 to 36 to get the number of small dogs competing, which is 42.5. Of course, it's not actually possible for half a dog to compete in a dog show, but for the sake of this math problem let's assume that it is. Answer: Adding two decimals together is easier than it looks. Don't let the fact that 8.563 has fewer numbers than 4.8292 trip you up. All you have to do is add a 0 to the end of 8.563 and then add like you normally would. I am an odd number. Take away one letter and I become even. What number am I? Answer: Seven (take away the 's' and it becomes 'even'). Using only an addition, how do you add eight 8's and get the number 1000? Answer: 888 + 88 + 8 + 8 + 8 = 1000 Sally is 54 years old and her mother is 80, how many years ago was Sally's mother times her age? Answer: 41 years ago, when Sally was 13 and her mother was 39. Which 3 numbers have the same answer whether they're added or multiplied together? Answer: There is a basket containing 5 apples, how do you divide the apples among 5 children so that each child has 1 apple while 1 apple remains in the basket? Answer: 4 children get 1 apple each while the fifth child gets the basket with the remaining apple still in it. There is a three-digit number. The second digit is four times as big as the third digit, while the first digit is three less than the second digit. What is the number? Answer: Fill in the question mark Answer: Two girls were born to the same mother, at the same time, on the same day, in the same month and the same year and yet somehow they're not twins. Why not? Answer: Because there was a third girl, which makes them triplets! A ship anchored in a port has a ladder which hangs over the side. The length of the ladder is 200cm, the distance between each rung is 20cm and the bottom rung touches the water. The tide rises at a rate of 10cm an hour. When will the water reach the fifth rung? Answer: The tide raises both the water and the boat so the water will never reach the fifth rung. The day before yesterday I was 25. The next year I will be 28. This is true only one day in a year. What day is my Birthday? Answer: You have a 3-litre bottle and a 5-litre bottle. How can you measure 4 litres of water by using 3L and 5L bottles? Answer: Solution 1 : First, fill 3Lt bottle and pour 3 litres into 5Lt bottle. Again fill the 3Lt bottle. Now pour 2 litres into the 5Lt bottle until it becomes full. Now empty 5Lt bottle. Pour remaining 1 litre in 3Lt bottle into 5Lt bottle. Now again fill 3Lt bottle and pour 3 litres into 5Lt bottle. Now you have 4 litres in the 5Lt bottle. That's it. Solution 2 : First, fill the 5Lt bottle and pour 3 litres into 3Lt bottle. Empty 3Lt bottle. Pour remaining 2 litres in 5Lt bottle into 3Lt bottle. Again fill the 5Lt bottle and pour 1 litre into 3 Lt bottle until it becomes full. Now you have 4 litres in the 5Lt bottle. That's it. 3 Friends went to a shop and purchased 3 toys. Each person paid Rs.10 which is the cost of one toy. So, they paid Rs.30 i.e. total amount. The shop owner gave a discount of Rs.5 on the total purchase of 3 toys for Rs.30. Then, among Rs.5, Each person has taken Rs.1 and remaining Rs.2 given to the beggar beside the shop. Now, the effective amount paid by each person is Rs.9 and the amount given to the beggar is Rs.2. So, the total effective amount paid is 9*3 = 27 and the amount given to beggar is Rs.2, thus the total is Rs.29. Where has the other Rs.1 gone from the original Rs.30? Answer: The logic is payments should be equal to receipts. We cannot add the amount paid by persons and the amount given to the beggar and compare it to Rs.30. The total amount paid is ₹27. So, from ₹27, the shop owner received 25 rupees and beggar received ₹ 2. Thus, payments are equal to receipts. How to get a number 100 by using four sevens (7's) and a one (1)? Answer 1: 177 - 77 = 100 ; Answer 2: (7*7) * (7 + (1/7)) = 100 Move any four matches to get 3 equilateral triangles only (don't remove matches) Answer: Find the area of the red triangle. Answer: To solve this fun maths question, you need to understand how the area of a parallelogram works. If you already know how the area of a parallelogram and the area of a triangle are related, then adding 79 and 10 and subsequently subtracting 72 and 8 to get 9 should make sense. How many feet are in a mile? Answer: Answer: Answer: A man is climbing up a mountain which is inclined. He has to travel 100 km to reach the top of the mountain. Every day He climbs up 2 km forward in the day time. Exhausted, he then takes rest there at night time. At night, while he is asleep, he slips down 1 km backwards because the mountain is inclined. Then how many days does it take him to reach the mountain top? Answer: If 72 x 96 = 6927, 58 x 87 = 7885, then 79 x 86 = ? Answer: Look at this series: 36, 34, 30, 28, 24, ... What number should come next? Answer: Look at this series: 22, 21, 23, 22, 24, 23, ... What number should come next? Answer: If 13 x 12 = 651 & 41 x 23 = 448, then, 24 x 22 =? Answer: Look at this series: 53, 53, 40, 40, 27, 27, ... What number should come next? Answer: The ultimate goals of mathematics instruction are students understanding the material presented, applying the skills, and recalling the concepts in the future. There's little benefit in students recalling a formula or procedure to prepare for an assessment tomorrow only to forget the core concept by next week. Teachers must focus on making sure that the students understand the material and not just memorize the procedures. After you learn the answers to a fun maths question, you begin to ask yourself how you could have missed something so easy. The truth is, most trick questions are designed to trick your mind, which is why the answers to fun maths questions are logical and easy. Cuemath, a student-friendly mathematics and coding platform, conducts regular Online Live Classes for academics and skill-development, and their Mental Math App, on both iOS and Android, is a one-stop solution for kids to develop multiple skills. Understand the Cuemath Fee structure and sign up for a free trial.
